

Skoltech

Evolutionary and functional genomics.

**Mikhail
Gelfand**

Professor,
Vice President for
Biomedical Research

- Bacterial genomics
 - New genes, their function and regulation
 - Evolution of regulatory interactions
 - Genome evolution
 - Metagenomics
- Systems biology of eukaryotes
 - Epigenomics
 - Transcriptomics and development

Molecular, applied, ecological, and medical microbiology

**Konstantin
Severinov**

Professor,
Director of Life Sciences
PhD program

- Interactions of bacteria with phages and other mobile genetic elements
- Global ecology of prokaryotes and their viruses
- Basic mechanisms of CRISPR-Cas adaptive immunity
- Prediction and validation of phage defence systems
- Prediction and validation of new antibiotics

Evolutionary Genomics

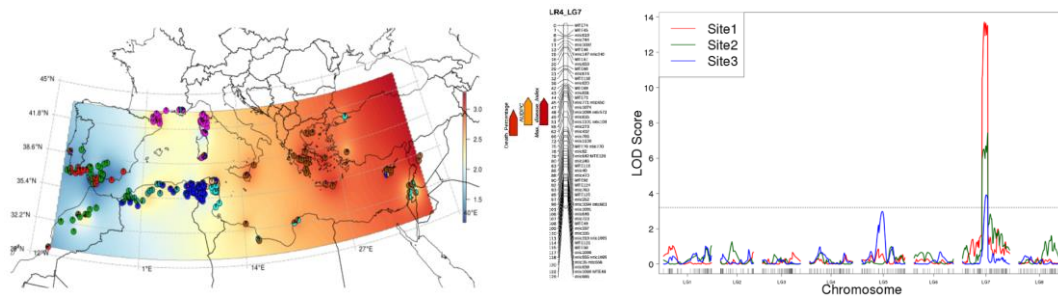

**Georgii 'Yegor'
Bazykin**

Professor,
Director of Life Sciences
MSc program

- Evolutionary dynamics of pathogens
- Mutations in germline and cancer
- Natural selection and genomic interactions

Whole genome-based analysis of adaptive or agronomic traits

$$y = Xb + Zu + e$$
$$u \sim N(0, A\sigma_u^2), e \sim N(0, I\sigma_e^2)$$

Laurent Gentzbittel

Professor,
Head of Digital Agriculture
Laboratory

- Quantitative Genetics
- Population Genomics
- Plant biotechnologies
- Plant breeding, Genomic Selection

Adaptive Immunity in health and disease

**Dmitriy
Chudakov**

Associate Professor

- Deep profiling of T-cell receptor and B cell/antibody repertoires
- Development and aging of adaptive immunity
- Cancer immunology and immunotherapy
- Autoimmune diseases
- Vaccination
- Blood cell transplantation
- Helper T cell subsets
- Effector and memory B cells
- Gamma-delta T cells
- Single cell transcriptomics

Comparative & Structural Transcriptomics

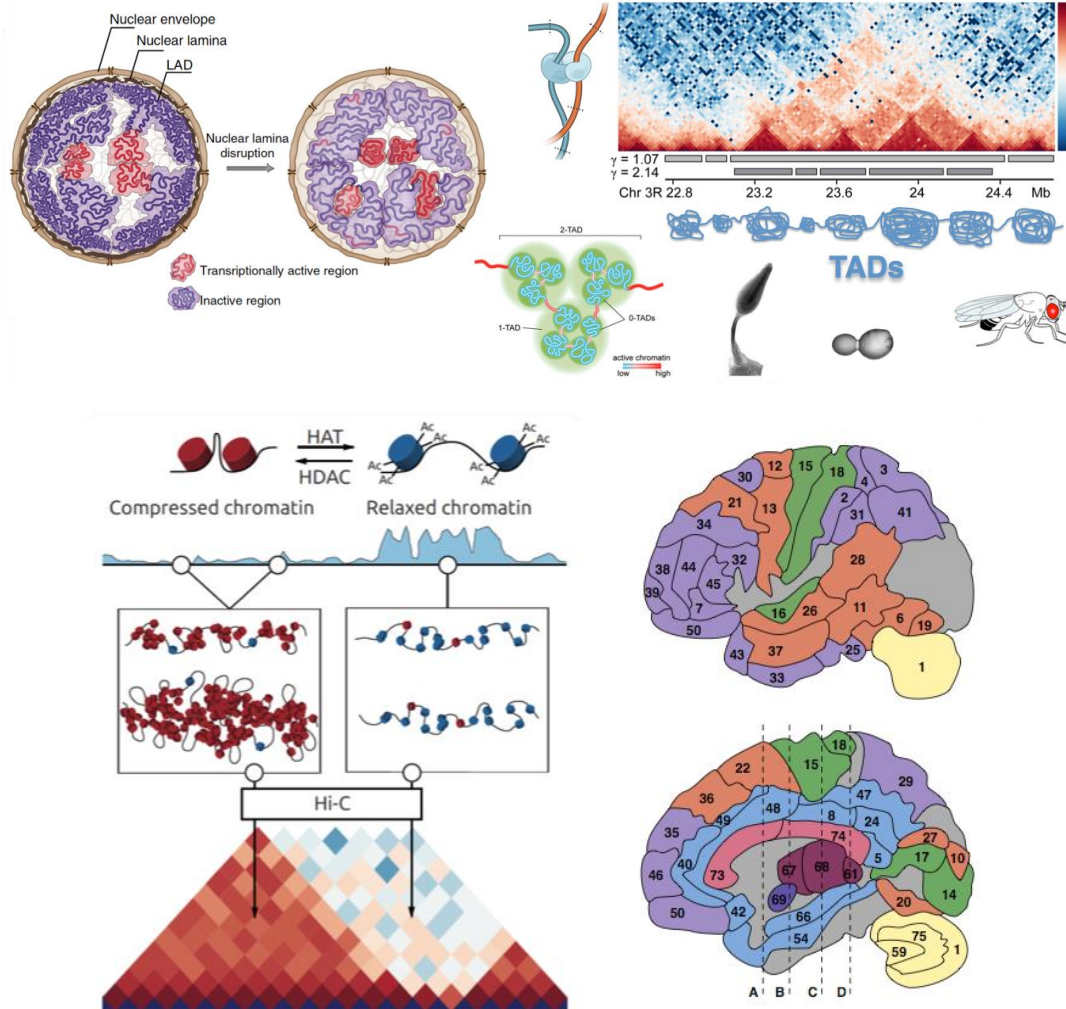

Dmitry Pervouchine

Associate Professor

- Mechanisms of pre-mRNA splicing and polyadenylation
- Tissue- and tumor-specific alternative splicing
- Long-distance RNA structure and RNA processing
- Auto- and cross-regulatory splicing networks

Multi-omics data analysis

**Ekaterina
Khrameeva**

Assistant Professor

Chromatin architecture:

- Chromatin organization changes between life stages
- Histone acetylation level vs. formation of TADs
- Chromatin structure changes during spermatogenesis

Other projects:

- SIRT6 protein: regulation of gene expression and metabolism
- Evolution of the human brain lipidome

Fluorescence imaging of live cells and organisms

**Konstantin
Lukyanov**

Professor

- Multiparameter and super-resolution fluorescence imaging
- Fluorescence time-resolved imaging
- “Million-color” cell labeling
- Visualization and computer vision-based tracking of epigenetic chromatin state in live cells

Mechanisms of transcription

AR9

phi14:2

Maria Sokolova

Assistant Professor

- Transcriptional strategies of bacteriophages:
 - crAssphages, the most abundant viruses in human gut
 - Phages of thermophilic bacteria
 - Phages with uracil-containing DNA genomes
- Function and structure of unusual RNA polymerases
- Pseudo-nucleus of Jumbo phages (new topic!)

Biogenesis and functions of RNA

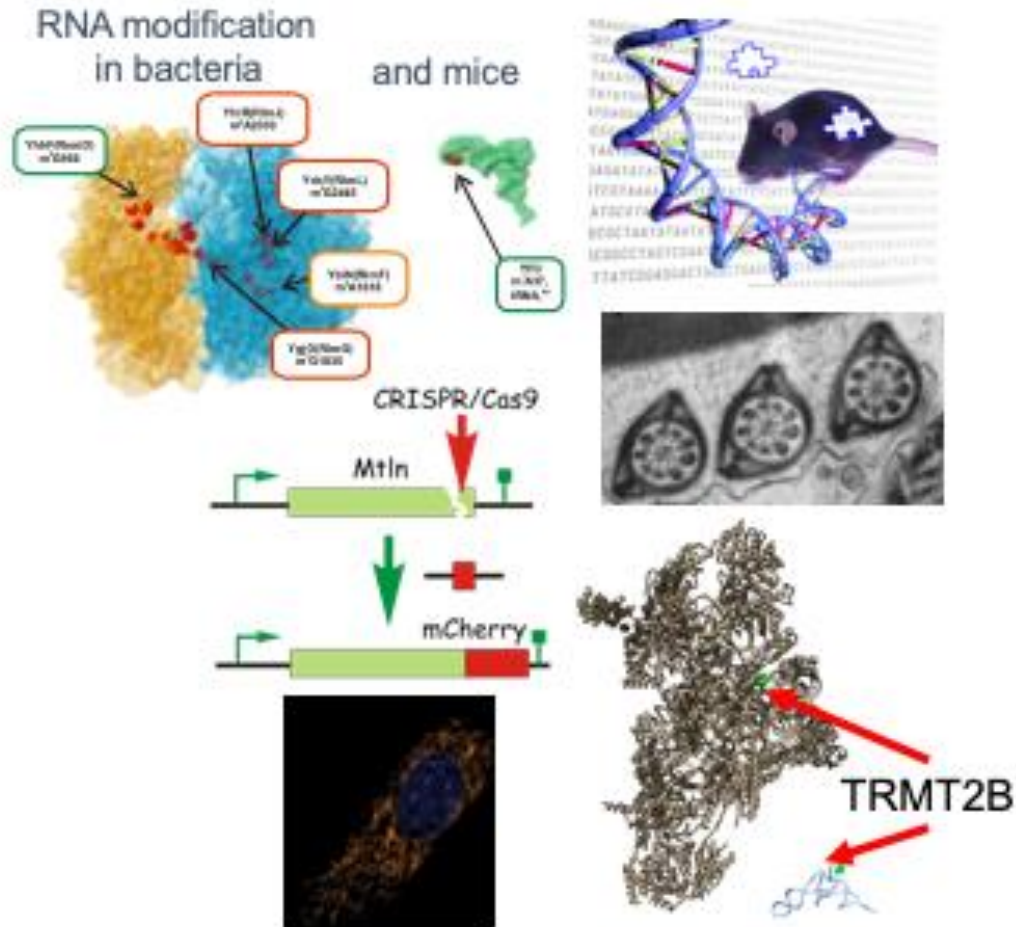

**Olga
Dontsova**

Professor

- Novel long noncoding RNAs (lncRNAs) for diagnostics of different liver cancers
- Search for functional noncanonical small Open Reading Frames
- Human telomerase RNA biogenesis
- Function of hTERP protein encoded in human telomerase RNA

RNA modification in bacteria and mice

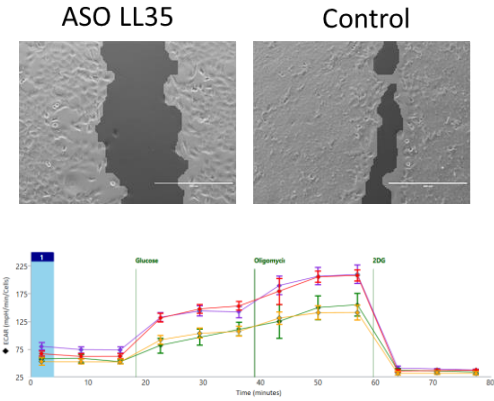

**Petr
Sergiev**

Associate Professor

The lab uses genome engineering for studying the function of genes in bacteria and mice with the emphasis on genes of previously unknown function related to RNA modification and translation apparatus

Modified nucleic acids *in vitro* and *in vivo*

**Timofei
Zatsepin**

Associate Professor

- Roles of lncRNA in the liver and beyond
- Targeted delivery of modified antisense/siRNA/sgRNA *in vitro* and *in vivo*

Extracellular matrix in inflammation and tissue repair

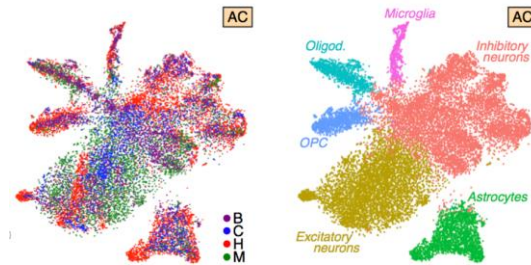

Yuri Kotelevtsev

Professor

- Hyaluronan synthases: the key catabolic enzymes in extracellular matrix homeostasis
- Coumarins as chemoprotective agents in liver fibrosis and hepatocellular carcinoma
- Reprogramming macrophage pro inflammatory and regenerative phenotypes using RNAi
- Hyaluronan homeostasis in brain trauma and cerebral hypoxia

Molecular mechanisms of human brain evolution and function

**Philipp
Khaitovich**

Professor

- Cellular organization of the human brain
- Molecular mechanisms of schizophrenia, depression, and autism
- Molecular evolution of the human brain
- Molecular mechanisms of brain development and aging
- Brain metabolism in humans and mammals

Computer vision for medical imaging

**Mikhail
Belyaev**

Assistant Professor

- Computer vision for Computed tomography, Magnetic Resonance Imaging:
 - Estimation of various biomarkers
 - Medical decision support systems
- Machine learning for neuroimaging
 - macro-connectomics
 - nonlinear image coregistration

Remote Controlled Biomaterials

Intracellular controlled release Microchamber arrays

Gleb Sukhorukov

Professor

Biomaterials and Drug Delivery

- Encapsulation of wide class of bioactives
- Storage, Protection and On-demand release
- Intracellular delivery and imaging tools
- Multifunctional coatings and micropackaging
- Light, Magnetic and Ultrasound Controlled Biomaterials

Applications:

- Drug delivery Systems, Cell Delivery
- Microencapsulated sensors inside cells
- Remote-controlled release
- Programmed release from stents and coatings
- Marking and Tracking of individual cells
- Functional thin films and surfaces
